

Onboarding Solution

Integrating external organizations into shared public health systems can be difficult. SSG's Onboarding Solution makes it easy, saving you time and resources.

State and local public health jurisdictions are required to onboard and then integrate a tremendous number of external organizations to shared public health systems for data collection and sharing, which has been especially difficult for agencies to manage during the COVID-19 pandemic.

SSG's Onboarding Solution makes onboarding and integrating external organizations to your current system quick and easy with self-service account creation, automated data exchange certification testing, and API integrations that work with any existing IIS, Disease Surveillance, or Vital Records system.
